CAREER OBJECTIVE

To be potential resource to the organization, where I can utilize all my skill and knowledge which would help the organization to grow and further enhances my growth in profile. It would be my never ending dedication to maintain the spectrum of integrity, honesty and character

PROJECT DETAILS

• Visible Light Communication

Data is captured in modulated light frequencies of a solid-state LED light source and is then transmitted and received by LiFi-enabled devices. A photosensitive detector demodulates the light frequency signal and converts it back into an electronic data stream and – in so doing – allows for faster-than-ever, more secure, bi-directional wireless communication

• Face Mask Detector with OpenCV, TensorFlow and Deep Learning

Project will detect face mask on person every second the real time photo sample is compared with dumped data samples of with and without mask data samples, the final result will be differentiated with red and green color.
